

„Grey List“

Standards Commission for Straight Feeding Stuffs

State: May 2023

The straight feeding stuffs listed below are now to be classified as feed additives or deleted from the positive list as a result of changes in feed legislation or due to lack of market relevance. Therefore the classification as straight feeding stuff in the positive list is eliminated. In the 15th edition of the positive list (finalisation May 2023) these feeding stuffs are as a result of this no longer listed. Until final clarification, these products remain on the "grey list" and may be used under recognition of QS and QM up to final regulation.

| Number | Designation | Description | ⁵⁾ Distinguishing features (%) | ⁵⁾ Requirements (%) | ⁵⁾ Instruction for labelling (constituents to be declared) | Additional information on the production process | Remarks |
|----------|--|--|---|---|---|--|---|
| 17.01.01 | Ammonium acetate for bovine, sheep and goats with functioning rumen | Product consisting of ammonium acetate in aqueous solution CH ₃ COONH ₄ | | Ammonium acetate in the product as such min. 55 | Nitrogen Moisture | Data sheet required | Classification as additive in clarification |
| 17.01.02 | Ammonium lactate from fermentation for bovines, sheep and goats with functioning rumen | Ammonium lactate produced by fermentation of whey with Lactobacillus bulgaricus | | Crude protein in the product as such min.44 | Crude protein Crude ash Moisture | Data sheet required | |
